Extension page: <http://ecommerce.aheadworks.com/magento-extensions/ajax-catalog.html>

AJAX Catalog changes the process of catalog surfing from the "page to page" type to "AJAX autoloading of the next page". This Magento extension makes shopping in your store fast, easy, and comfortable. Now your visitors don't have to click the "Next" button every time they want to see the next products set - all store items are displayed on one page.

## Installation

1. Backup your web directory and store database.

[Click to view details](#)

You can make backup copies with any tool you find appropriate

If you are going to use the native Magento backup function, navigate to **System -> Tools -> Backups** and perform **System** and **Database** backups

2. Log in to the Magento backend

3. Disable compilation

[Click to view details](#)

Navigate to **System -> Tools -> Compilation**.

If Compiler status is Disabled, you can skip to the next step

If Compiler is enabled, disable it.

**IMPORTANT:** after the extension is installed, you can enable the compilation again; **IT IS CRUCIAL** that you use **"Run Compilation Process"** function, not just "Enable button"

Installing an extension with the Compilation enabled will result in store downtime.

#### 4. Flush store cache

Click to view details

You can flush the store cache in 2 ways:

- **via the backend:**

Navigate to **System -> Cache Management** menu, and click **Flush Magento Cache** button

Cache Type	Description	Associated Tags	Status
<input type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	ENABLED
<input type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED

- **via filesystem:**

On your server, navigate to Magento root folder, then proceed to **/var/cache/**; delete all the content there.

#### 5. Download the extension package from your account and extract the downloaded archive

#### 6. Copy the content of **/Step\_1/** folder to your store's root directory

**If you are using a custom theme,**  
read the instructions [here](#).

In case you are using a custom theme, it is recommended to copy the design files to your current theme's folders. In case there are several themes in use at the same store, the design files must be copied to each of them.

- Find this folder in the package: `/step_1/app/design/frontend/base/default/`; copy its content to `/app/design/frontend/[your_package]/[your_theme]/`
- Find this folder in the package: `/step_1/skin/frontend/base/default/`; copy its content to `/skin/frontend/[your_package]/[your_theme]/`

#### 7. Copy the content of **/Step\_2/** folder to your store's root directory

#### 8. Flush store cache again; log out from the backend and log in again.

## Configuration

Any functionality of AJAX Catalog is disabled by default. To enable and configure the extension, go to the **System > Configuration > aheadWorks Extensions > AJAX Catalog** backend page. Here you can enable the AJAX Catalog functionality and select the type of AJAX surfing on the product list.

## Uninstallation

1. Disable compilation, in case it is enabled.
2. Login to your FTP, navigate to **app/etc/modules/**
3. Open the file **AW\_Ajaxcatalog.xml** and change the following line:

```
<active>true</active>
```

to

```
<active>false</active>
```

4. Clear the cache under var/cache
5. Make sure that the site is working properly, otherwise roll back the changes and apply to our technical support.
6. If everything works fine, it is safe to delete the files of the extension.

## Troubleshooting

**After the extension installation the store gives an error, or blank page, or suggests to start Magento installation procedure.**

Change the owner of the extracted extension files to the web server user and set 775 permissions on them. Clear the store cache and try again.

**There is no aheadWorks extensions under my configuration section, or having the extension tab clicked I get a blank page, or Access Denied error.**

Clear the store cache, browser cookies, logout and login again.

**I've set up everything correctly, inserted the HTML code but there is nothing on that page.**

Clear the store cache, clear your browser cache and domain cookies and refresh the page.

**My configuration changes do not appear on the store.**

Clear the store cache, clear your browser cache and domain cookies and refresh the page.

**You enabled the AJAX Catalog functionality, but product list became empty**

You use a different from default theme - be sure to rename step\_1/app/design/frontend/default/default and step\_1/skin/frontend/default/default folders to valid your store's values.
